

ZOOX

INTRODUCING ZOOX

The robotaxi
designed
around you

ZOOX

THIS IS ZOOX

**Zoox was founded in 2014 to
create a safer, cleaner, and more
enjoyable future on the road.**

› Fully autonomous › All-electric › Built around riders, not a steering wheel

ZOOX

Reasons to believe

IT'S YOUR JOURNEY

Freedom to plug in. Freedom to switch-off. Everything is purpose-built to give time, space and choice back to our riders.

CONSISTENT CREDIBILITY

One-of-a-kind robots built by one-of-a-kind humans. Backed by world-class partners who share our vision and have the resources and patience to scale.

360 DEGREES OF SAFETY

From our sensor suite to our seatbelts, safety is designed into every detail. We think about it constantly so our riders don't have to.

MORE THAN A ROBOTAXI

We're reshaping mobility in dense urban environments. This means solving hard problems and creating new possibilities for how people experience cities.

PREMIUM MATERIALS

C

TOUCHSCREEN

ZOOX

Comfort at the core

A

Set your coffee down or top up your phone with wireless charging. Travel in comfort with everything you need and nothing you don't.

B

Premium materials that look and feel good, day after day. Feel supported to sit back and relax.

C

Check your ETA, location, and route any time – and set the music and air exactly the way you want them.

ZOOX

Face your friends and family for travel-time chats

Each rider gets the same comfort, space, and technology.
(And no one has to squeeze in behind a driver.)

ZOOX

Or relax, and take
in a starry night

ZOOX

VEHICLE SPECS

Getting around the city
has never been this easy

ZOOX

The future of mobility is here

A

4-WHEEL STEERING

From tight curbside pickups to tricky U-turns, Zoox can ace all sorts of precise maneuvers.

B

SENSORS

Zoox uses a unique sensor architecture combining cameras, radars, and lidars to see its surroundings.

C

SUBWAY-STYLE DOORS

For easy drop-off and pickup, the subway-style doors don't swing out into crowded streets or sidewalks.

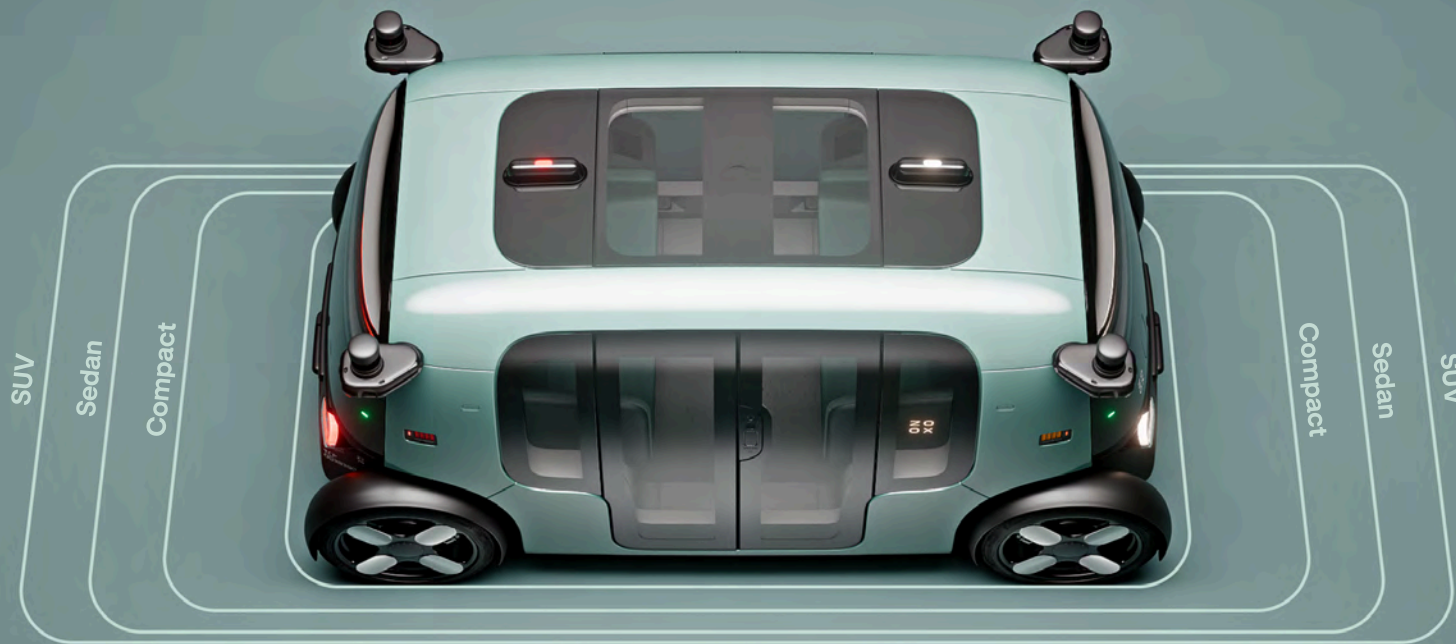

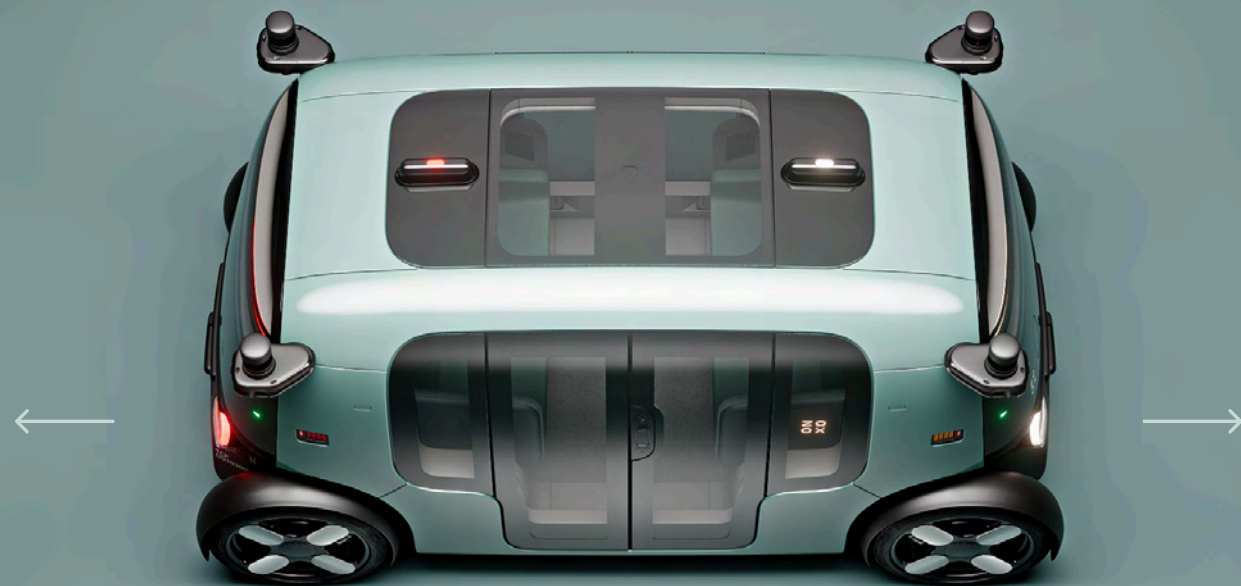

D

ONBOARD COMPUTER

Zoox is built with a powerful compute system, as well as redundant backups, that house our proprietary software.

ZOOX

A better way to ride

COMPACT SIZE

No driver frees up space inside, while the vehicle stays small enough to navigate nimbly through busy streets.

BIDIRECTIONAL

Zoox has no front or back – it can go either way as needed, so pickups and drop-offs become seamless.

ZOOX

AUTONOMY

Groundbreaking technology,
one great experience

360° OVERLAPPING FIELD OF VIEW

Our sensor placement provides an overlapping field of view and 360° coverage. This enables redundancy and allows the vehicle to perceive all that's around it equally well.

SEES OVER 150M

Zoox can see over 150m away in all directions—and even around corners. That means it can safely see what's coming long before it's anywhere close.

ZOOX

SOUND AND LIGHT SIGNALS

Zoox communicates with sound and light

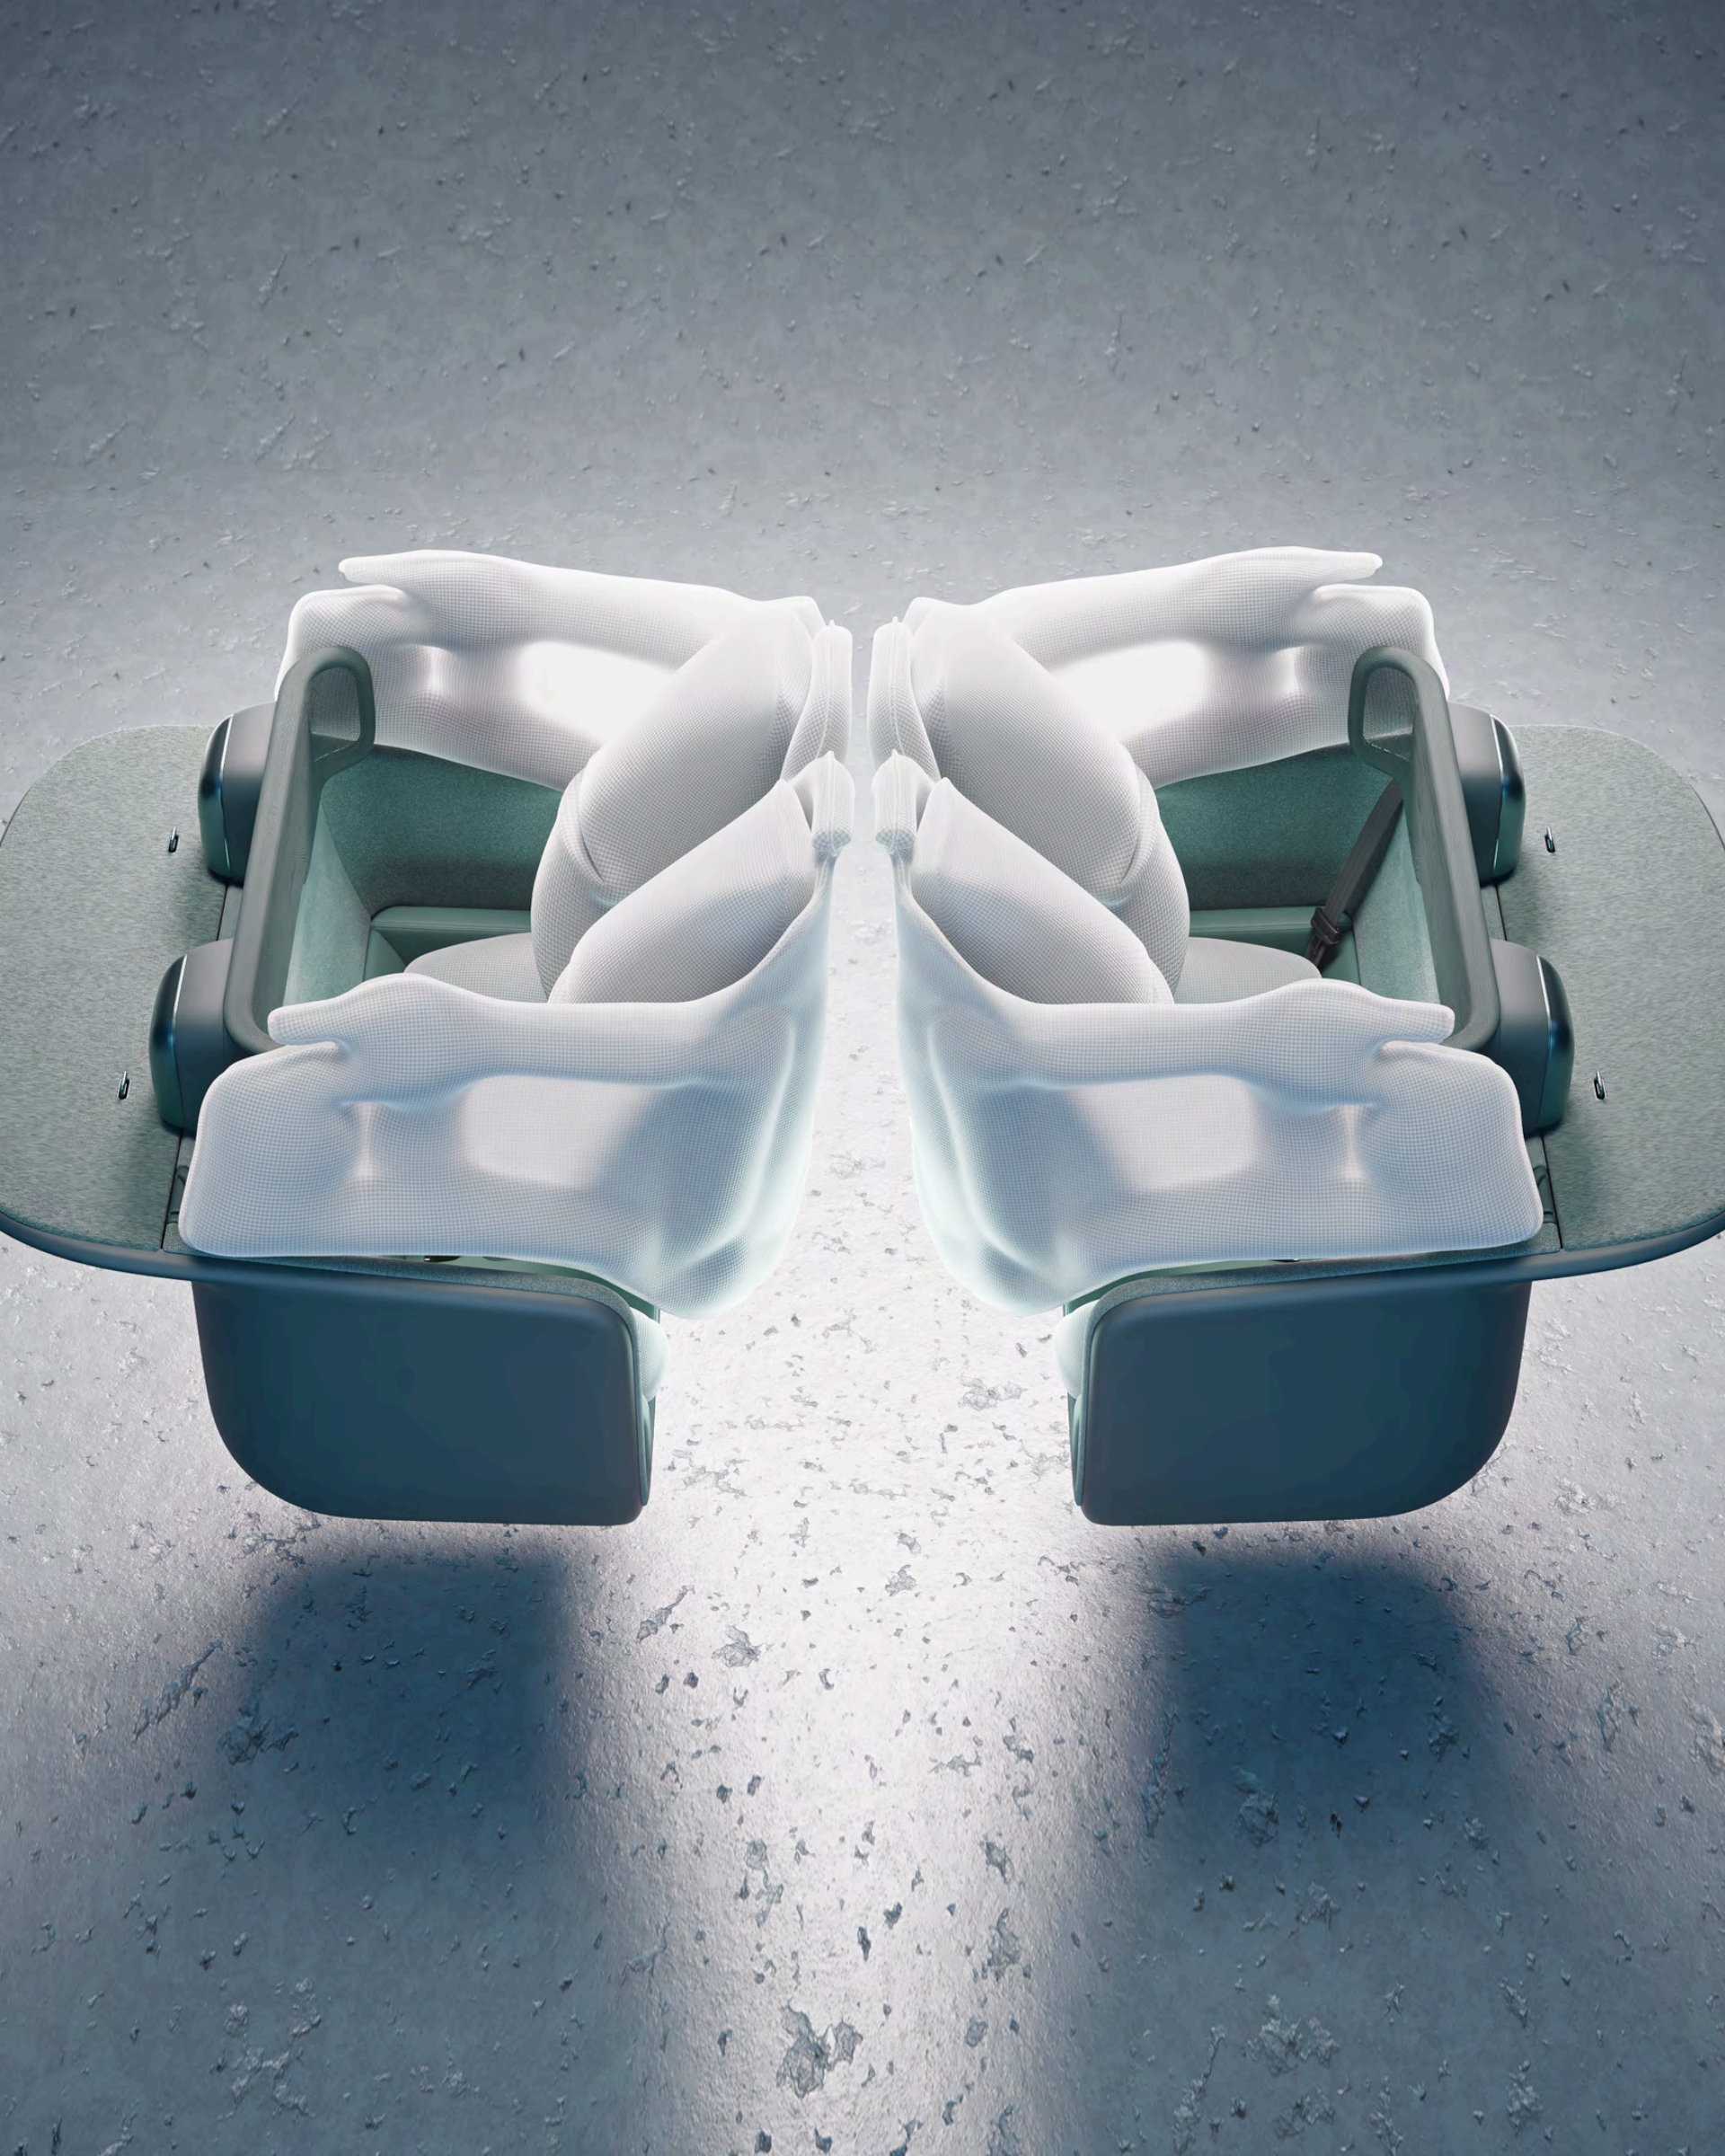

SOUND

Zoox can send sound signals
to identify itself for a pickup.

LIGHT

Our lighting system tells other
road users what Zoox will do next.

ZOOX

SAFETY

Safety first, for you and everyone else

Our Safety Innovations

REIMAGINE THE AIRBAG

Traditional airbags are designed around the layout — and compromises — of a traditional car. Starting from scratch has enabled us to radically rethink the airbag, to better protect your head, neck, and chest.

EQUAL CRASH PROTECTION FOR ALL RIDERS

Most cars only target a 5-star crash rating for people in the front seat. We think all riders deserve the same level of protection.

ALWAYS KEEP A BACKUP

Our battery and powertrain are designed without any single point of failure. And our innovative, bidirectional steering system means there's always a backup if anything goes wrong.

ZOOX
